

BRANDS STUDIO

RECENT DEVELOPMENT & FEATURE IMPLEMENTATION REPORT (LAST 3-4 DAYS)

Date: July 08, 2026

1. E-Commerce Promotions & Dynamic Checkout

- Admin Coupon CRUD:** Created a premium Coupons Control panel in the Admin dashboard allowing creation of flat/percentage discount codes, validation ranges, and activation limits.
- Checkout Calculations:** Updated Cart and Checkout views to synchronize with localStorage applied coupons (bs_coupon) dynamically calculating discount deductions on total order values.

2. User Experience & Notifications

- Cart Toast Notification:** Configured top-center high-contrast dark popup toast notifications triggered immediately when products are added to the cart.
- Dynamic Data Linking:** Linked custom events in ProductCard and ProductDetail pages to pass product meta information straight to the master StoreLayout toast listener.

3. Mobile View Layout & Aesthetics Overhaul

- Viewport Width Safety:** Applied overflow-x-hidden wrapper properties globally to prevent mobile layout breakage, eliminating side blank/black empty spacing.
- Header Space Optimization:** Shifted overcrowded wishlist, login, and registration links into the mobile menu drawer, preventing layout overlap bugs.
- Typography & Icons:** Restyled brand logo with elegant typography (BRANDS font-light, STUDIO font-black with tracking 0.25em), added custom clothing hanger SVG icon, and integrated luxury shorter-middle-line hamburger menu button.

RECENT DEVELOPMENT & FEATURE IMPLEMENTATION REPORT (LAST 3-4 DAYS)

4. Nested Categories & Subcategories Logic

- **Subcategory Admin Panel:** Created a dedicated Subcategories page letting admins add, edit, and delete sub-levels (e.g. Cotton, Silk, Wash & Wear) under main parent categories.
- **Dependent Dropdowns:** Re-architected product creation and editing forms to use split cascading dropdown selectors. Choosing a Main Category dynamically populates its child subcategories.
- **Scoped Name Validation:** Removed global name uniqueness validation, scoping it to parent_id instead. This permits duplicate subcategory names (e.g. "Cotton" under both Man and Womenswear) while automatically formatting unique SEO slugs (e.g. man-cotton, womens-cotton) to bypass DB index conflicts.

5. Admin Analytics & Net Profit Calculations

- **COGS-based Net Profit:** Redefined Net Profit formula from gross revenue minus operating expenses to a standard retail accounting model: $\text{Net Profit} = \text{Total Sales} - \text{Cost of Goods Sold (COGS)} - \text{Operating Expenses}$. COGS dynamically queries variant/product unit cost prices at time of sale.
- **Order Returns Safety:** Excluded returned (POS refunded) and cancelled orders from Gross Sales, Net Profit, and monthly performance sales chart data, ensuring 100% database audit precision.
